

**Answer the following questions as a team:**

**What do you think went well on the project and should be continued in future projects?**

Being able to implement features and help group members with issues they had.

**What do you think did not go well and should be improved in future projects?**

- Reading over guidelines and determining the scope of the project.
- Distributing roles and work among group members.
- Communication between group members did not go well as some members were unresponsive at times.

**What was the single most frustrating part of the project?**

Time constraints and individual schedule conflicts.

**What was the single most rewarding part of the project?**

Looking over the project at the end and seeing the result of all the hard work that our group put in.

**Were the goals/requirements of the project clear to you?**

No. We planned to ask the TA/professors whenever we had questions, however we were unable to get around to asking for clarification.

**Were you given the adequate resources to achieve those goals?**

Yes and no. The project being open-ended means that we could use anything to create the project and have the internet for resources on implementation. However, due to the previous lack of complete understanding with project guidelines, the greatest resources can only go so far to help create the project.

**On a scale of 1-5 (1=best, 5=worst), how complete do you think the project planning was before we began working?**

3

**Was the schedule realistic for the deliverables?**

Yes, but more time would have been favorable.

**Were all deliverables met?**

No. We were missing HVAC implementation and some database persistence.

**Did we deliver on time?**

Yes. We had something to show for the demo.

**Was there any effort grossly over or underestimated?**

Underestimated overall scope. Overestimated how long some deliverables would take to complete.

**What were the core strengths of this project team?**

Perseverance and determination

**What were the biggest weaknesses of this team?**

Communication and planning.

**Did we get the results we wanted from this project?**

**o If yes, why? If no, why?**

Yes. Not all desired features were able to be implemented at the end, however we were satisfied with what we currently have.

**Anything else that should be discussed and is not addressed in the above questions?**

n/a
